CF sent infantry elements and engineers in order to confirm the presence of the IED. CF Engineers spotted an antenna and called EOD. EOD exploited the site and found a Radio Controlled IED. The IED was rendered safe at approximately 04 0830Z Sep 07. The IEDs main charge was blown in place and a post blast conducted. The recovered items were forwarded to CEXC KAF.

ITEMS RECOVERED:

- a. One (1x) black plastic box was recovered. Handwritten and underlined on one end of the black plastic box, in silver permanent marker, are the numbers, 952. A manufacturing label is attached to the top of the black plastic box. The label. Printed on the label is a picture of a sports car and, Sony Car Door Lock, Sony Electronics.
- b. One (1x) 12 volt motorcycle battery
- c. One (1x) unidentified electric detonator, pink in color, was recovered.
- d. Two (2x) 122 mm HE projectiles, possibly Russian, were destroyed by EOD on the scene.
- e. A sample of an off white plastic explosive was tested. When tested with SMITHS HAZMAT ID, the substance had a .97213 similarity to PETN.
- f. The battery and the RTF were wrapped in a commercial plastic bag and sealed with red plastic tape.

Upon arrival the team inspected munitions to ensure they were safe to transport. The team found that three of the Type 63 rockets had no venturi covers and had wires protruding from them. One obviously had been tampered with and the other two were suspect. Without an x-ray capability to verify condition of the rockets they were treated as booby-trapped. The rockets were remotely moved out of the conex and put onto a trailer. The path out of the FOB was cleared of personnel and the items were transported to a more suitable location for detonation. Also destroyed was an MJ-1 fuze without shipping cap. The team identified and deemed safe to move and transported the remaining ordnance to their SHA.

Ordnance Destroyed:	NEW:
1 ea MJ-1, Chinese Rocket Fuze, PD	.08 lbs
3 ea 107mm, Chinese Rocket, Type 65	8.58 lbs

Ordnance Recovered:	NEW:
2 ea MJ-1, Chinese Rocket Fuze, PD	.16 lbs

The patrol was given special instructions to stop at an area where LNs were reported to be digging. The area appeared to be safe and the villagers were digging culverts. The rest of the patrol was uneventful.
- 4765F57B-43DA-4C44-8892-B64B9C9238B2,2007-10-16 05:30:00,Explosive Hazard,IED Found/Cleared,2007-335-091053-0069,(EXPLOSIVE HAZARD) IED FOUND/CLEARED RPT (VOIED) CEXC : 0 INJ/DAM,"(S//REL) On 16 Oct 07 Coalition Forces (CF) conducted a road search in a wadi. A plastic covered metal object was found. EOD responded and exposed a complete IED. The IED consisted of a battery pack, pressure plate and a main charge. The main charge consisted of one (1x) warhead from a 107 mm HE rocket and three (3x) 82 mm mortar projectiles.

ITEMS RECOVERED:

- (C//REL) One (1x) 107 mm HE Rocket Warhead. The 107 mm HE rocket is an electrically initiated, spin-stabilized rocket incorporating a high-explosive fragmentation warhead. Normally fired from a multiple or single-tube launcher system. The warhead contains approximately 1.3 kilograms of TNT as main charge with a pressed-in 77-grams tetryl booster. Not provided to CEXC.
- (C//REL) Three (3x) Projectile, 82 mm, mortar, HE. The projectiles have not been fired, and on one of them a piece of card board from the packaging was stuck on the side of the projectile. On all three projectiles the aluminum fins were badly corroded. Two of the mortars have been identified as **Austrian projectiles, 82 mm HE Mortar, HE83LD with a PD T37A1B1 fuse** the third one has different marking but looks the same. On two of the fuses, attempts were made by the insurgents to remove the fuse but they failed. Not provided to CEXC.
- (C//REL) One (1x) Electric detonator, copper, commercial type with four (4x) choke rills. Two copper electric wires, with a yellow plastic isolation are coming out of the detonator. The base of the detonator has a cone shape dent. Length 6.2cm, diameter 7mm. Not provided to CEXC.
- (C//REL) One (1x) Pressure plate consisting of a piece of wood with a contact strip nailed on it. On both ends of the wood is an insulator. On top of the insulators is a saw blade secured with nails. The pressure plate is inside a piece of blue irrigation hose and both ends are closed with black tape. On both ends, a white double strand wire is coming out of the pressure plate. Length 46cm, Width 9cm, Height 8cm.

e. (C//REL) One (1x) battery pack. The battery pack consist of (2x) two plastic battery holders for D-Cell type batteries. Both battery packs are commercially made. The larger one has a capacity for 6 D-Cell batteries. The small one contained two (2x) D-Cell batteries. The batteries in the battery holders are connected in series. The battery holders are also connected in series to each other. The battery packs are made from hard, black plastic. On the outside of the plastic casing there are two terminals, one positive and one negative. The battery packs are held together with rubber strips made from an inner tube. The remaining voltage of the battery pack, measured the same day of the incident, was 12,66 Volt. The dimensions of the larger battery holder are length 20cm, width 8cm, height 4cm. The dimensions of the smaller battery holder are length 14cm, width 4cm, height 4cm.

f. (C//REL) Several meters of electric twin strand multi core white plastic isolated, marked made in IRAN.

g. (C//REL) In the evidence bag for this report was a plastic bag and a glass sample jar with a yellow powder. Not further described in the report (TFUEOD-111).
